TEAM C HILL

Chill more.

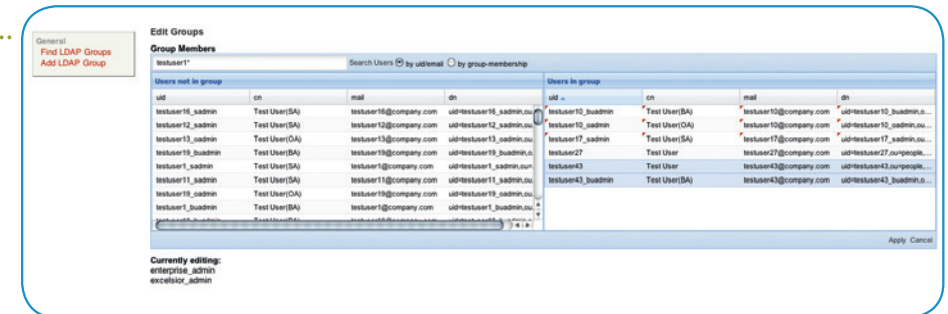

Managing a variety of Windchill Systems? TeamChill is a user-friendly, transparent way to administer all your accounts by centralizing and automating many of your routine administrative tasks, including managing passwords, synchronizing administrative accounts and controlling group memberships.

TeamChill lets you spend less time clicking, and more time chilling out.

- rich visual ajax-based user interface
- fault tolerance for unresponsive staging systems
- rapidly manage users and groups across multiple staging systems
- seamless trac integration

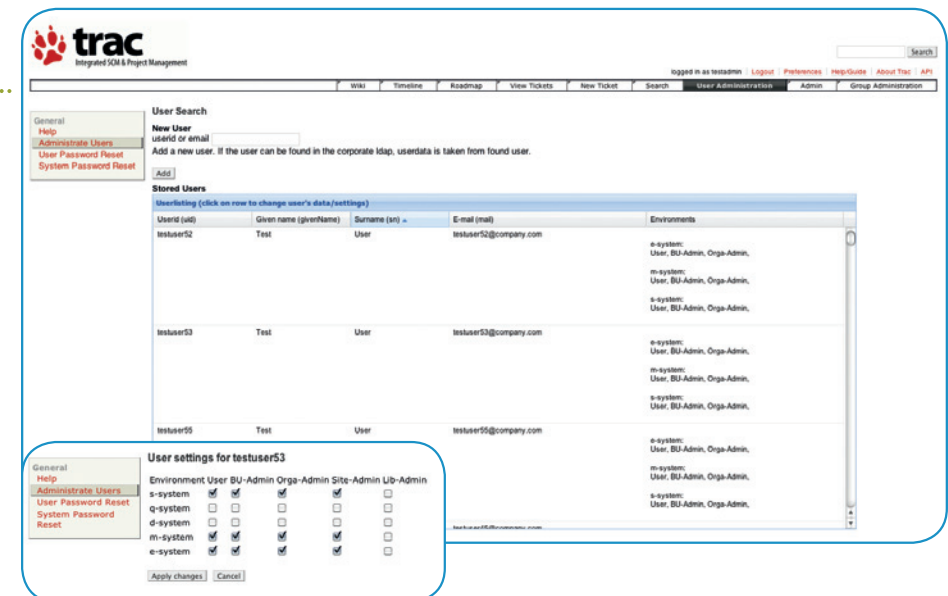

CONTROL GROUPS

- no orgadmin privileges required to manage groups
- create new groups for selected staging systems
- search for groups within specific staging systems
- edit a single group's name and description
- add/remove/edit members of multiple groups simultaneously
- search for new group members by uid/email
- search for new group members by their membership in other groups
- alternate UI for non-javascript environments

CONTROL USERS

- manage administrative accounts across multiple Windchill staging systems
- auto-generate Windchill load files for administrative accounts
- auto-generated load files stored in both file system and subversion version control
- change user passwords for all administrative accounts over your staging systems with one click
- email authentication/notification for password resets
- enable administrator to reset all passwords for any specified staging system
- nagios/shell integration for periodic system password resets
- add new users for staging systems based on data in corporate ldap
